

Plant & Go Range

KFS Special Vehicles lead the field in the design and manufacture of 3.5 ton plant transportation equipment.

- Multi functional bodies
- No tachograph needed
- Low load angle
- High payloads
- Built on all mainstream manufacturers
- Ability to produce bespoke bodywork

We have developed a product which not only offers high payloads (1,600kg), but has a bed height from the ground of only 530mm.

This unique design means the vehicle can be used as a traditional dropsider to carry general items i.e. jet washers, gas cylinders, scaffolding, but also allows it to deliver light plant, removing the need to tow a trailer or have the cost of fitting and maintaining a tail lift.
